FOREWORD

One of the roles of Northamptonshire County Council as the Lead Local Flood Authority (LLFA) is to carry out investigations into flooding incidents if they meet the set thresholds.

The LLFA will:

- Identify and explain the likely cause/s of flooding;
- Identify which authorities, communities and individuals have relevant flood risk management powers and responsibilities;
- Provide recommendations for each of those authorities, communities and individuals; and
- Outline whether those authorities, communities or individuals have or will exercise their powers or responsibilities in response to the flooding incident.

The LLFA cannot:

- Resolve the flooding issues or provide designed solutions; or
- Force Authorities to undertake any of the recommended actions.

EXECUTIVE SUMMARY

This Flood Investigation Report (FIR) has been completed by David Smith Associates on behalf of Northamptonshire County Council (NCC) under its duties as the Lead Local Flood Authority (LLFA) in accordance with Section 19 of the Flood and Water Management Act 2010 (F&WMA).

Statutory Context

Section 19 of the F&WMA states that on becoming aware of a flood which meets certain predetermined criteria, the LLFA must undertake a formal flood investigation in order to determine the relevant flood risk management authorities involved and which flood risk management functions have been, or should be taken to mitigate future flood risk. Where an authority carries out an investigation it must publish the results.

Within the Northamptonshire Local Flood Risk Management Strategy the approved thresholds for undertaking a FIR are:

A formal flood investigation will be carried out if one or more of the following occurs:

- Flooding affecting critical infrastructure* for more than three hours from the onset of flooding;
- Internal flooding** of a building has been experienced on more than one occasion in the last five years; and/or
- Internal flooding of five buildings in close proximity*** has been experienced during a single flood incident.

* Those infrastructure assets (physical or electronic) that are vital to the continued delivery and integrity of essential national services, the loss or compromise of which would lead to severe economic or social consequences, or to loss of life.

** A situation in which a building (commercial or residential) has been flooded internally, i.e. water has crossed the threshold and entered the building. This includes;

- Basements and ground level floors of the building;
- Garages/outbuildings if they are integral to the main occupied building. Garages adjacent or separate from the main occupied building are not included;
- Occupied static caravans and park homes. Tents are not included.

*** Where it is reasonable to assume that the affected properties were flooded from the same source, or interaction of sources, of flooding.

See over for additional notes
Notes:

- The LLFA will not investigate incidents of structural dampness or where basements are affected by groundwater entering through cracks in the basement walls or floor.
- In the event that the cause of, and the responsibility for addressing the flooding is well understood, no formal investigation will be undertaken.
- The LLFA will only undertake a flood investigation if the incident is formally reported within nine months of the flood event occurring.
- In addition to internal flooding of occupied buildings, affected properties shall also include those properties (commercial or residential) where water has entered gardens or surrounding areas which restricts access, or where flooding has disrupted essential services to the property such as sewerage or electricity supply. For businesses, this includes those where the flood waters are directly preventing normal trading practices.

Flooding Incident

It was deemed necessary to complete a formal investigation into the flood incident at Woodgate Road, Northampton that occurred on Sunday 27th May 2018. Internal flooding of more than five residential or commercial buildings in close proximity occurred during a single incident. This meets the threshold for investigation as set out above.

Cause of Flooding

The flooding was caused by intense heavy rainfall. Surface water drainage systems were unable to collect and convey rainwater effectively. This led to excess surface water flowing over ground following natural contours to low points around residential property.

Main Conclusion

Following this report, the local community and relevant authorities must continue to work together, sharing information and reports, and consider implementing the key recommendations set out in Section 8 of this report.
1. **INTRODUCTION**

1.1 Lead Local Flood Authority Investigation

1.1.1 Purpose of Investigation

1.1.1.1 Section 19 of the Flood and Water Management Act (F&WMA) states:

1. (1) On becoming aware of a flood in its area, a Lead Local Flood Authority must, to the extent that it considers it necessary or appropriate, investigate:

   a. which risk management authorities have relevant flood risk management functions, and

   b. whether each of those risk management authorities has exercised, or is proposing to exercise, those functions in response to the flood.

(2) Where an authority carries out an investigation under subsection (1) it must:

   a. publish the results of its investigation, and

   b. notify any relevant risk management authorities.

Within the Northamptonshire Local Flood Risk Management Strategy the thresholds for undertaking a Formal Investigation Report in the County have been determined as:

<table>
<thead>
<tr>
<th>Threshold</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flooding affecting critical infrastructure* for more than three hours</td>
<td>Those infrastructure assets (physical or electronic) that are vital to the continued delivery and integrity of essential national services, the loss or compromise of which would lead to severe economic or social consequences, or to loss of life.</td>
</tr>
<tr>
<td>from the onset of flooding;</td>

<td></td>
</tr>
</tbody>
</table>

See over for additional notes
Notes:

- The LLFA will not investigate incidents of structural dampness or where basements are affected by groundwater entering through cracks in the basement walls or floor.
- In the event that the cause of, and the responsibility for addressing the flooding is well understood, no formal investigation will be undertaken.
- The LLFA will only undertake a flood investigation if the incident is formally reported within nine months of the flood event occurring.
- In addition to internal flooding of occupied buildings, affected properties shall also include those properties (commercial or residential) where water has entered gardens or surrounding areas which restricts access, or where flooding has disrupted essential services to the property such as sewerage or electricity supply. For businesses, this includes those where the flood waters are directly preventing normal trading practices.

1.1.2 Flood Incident

1.1.2.1 It was deemed necessary to complete a formal investigation into the flood incident at Woodgate Road, Northampton that occurred on Sunday 27th May 2018. Internal flooding of more than five residential in close proximity occurred during a single incident. This meets the threshold for investigation as set out above.

1.2 Method of Investigation

1.2.1 Information Provided

1.2.1.1 Northamptonshire County Council (NCC) provided relevant mapping and data to assist with the investigation. This included water & sewerage company maps, highway asset maps, geology and groundwater flood risk maps, records of past flood events and rainfall data.

1.2.1.2 NCC provided specific addresses and contact details of properties that had reported flooding to the Flood Toolkit website. Limited details were provided of other properties where flooding had been reported anecdotally, or through other local authorities.

1.2.2 Public Engagement

1.2.2.1 A walkover of the area of flooding was carried out on 25th July 2018 to inspect the general topography and relevant features. This included visiting residents known to have flooded to fill out the Flood Investigation Question Sheet.

1.2.2.2 Residents and businesses who reported flooding via the County Council’s Flood Toolkit were written to and emailed to advise them of the site visit, together with a Flood Investigation Question Sheet that could be completed and returned.

1.2.2.3 County and District Councillors were written to and emailed to inform them of the investigation and the site visit, with an invitation to attend.

1.2.2.4 As the site visit and interviews proceeded, additional properties known to have flooded were brought to the attention of the Investigating Officer. These properties were visited to attempt to interview the resident. If no-one was available at these properties an explanatory letter and Flood Investigation Question Sheet was hand delivered, with a pre-paid return envelope.
1.2.3 Local Authority Engagement

1.2.3.1 Interviews were held with local authorities with flood risk management roles to understand their response to the flood incident.

1.2.3.2 These included

- Northampton Borough Council
- Northamptonshire County Council, Flood & Water Management Team
- Northamptonshire County Council, Emergency Planning Team
- Environment Agency
- Northamptonshire Highways
- Anglian Water
- Fire and Rescue
2. **RAINFALL ANALYSIS**

2.1.1 **General Description**

2.1.1.1 Radar mapping of rainfall on the evening of 27th May 2018 indicates a narrow band of precipitation moving in a north-westerly direction across the southwest of Northampton.

2.1.1.2 The areas of exceptionally heavy rainfall are focussed in small areas shown white on the radar map. These are areas where in excess of 64mm of rainfall fell.

2.1.1.3 This led to highly localised areas of intense heavy rainfall which would only affect specific areas and would only be recorded by rain gauges in the immediate vicinity.
2.1.2 Rain Gauges

2.1.2.1 Northamptonshire County Council rain gauges recorded highs of 17.8mm over the day in Moulton Park, 15.0mm over the day in Tiffield and 13.6mm over the day in Naseby. The six other operational rain gauges around the county recorded less than 10mm over the day.

2.1.2.2 EA rain gauges recorded 27mm in half an hour and 35mm in 2 hours in Quinton. The only other rain gauge which recorded more than 20mm in the event was Yardley Hastings with 19mm in half an hour and 22mm in 1hr. Other rain gauges around Northampton recorded around 10mm during this event.

2.1.2.3 AWS reported that rainfall radar recorded 93mm in one hour in Wootton.

2.1.2.4 The private Northampton Weather [http://www.northamptonweather.org.uk/index1.php](http://www.northamptonweather.org.uk/index1.php) rain gauge in Hardingstone recorded 58.8mm over 2 hours.

2.1.2.5 The average monthly rainfall for May is 54.4mm (MET Office Moulton Park climate station averages from 1981 – 2010).

2.1.3 Rainfall Return Period

2.1.3.1 The Flood Estimation Handbook published by the Centre for Ecology and Hydrology provides tools to estimate the event rarity based on rainfall depth and duration.

2.1.3.2 The two worst case rain gauge readings have been analysed. The AWS report for Quinton suggests a 1 in 837 annual exceedance probability event (0.12% probability of occurring each year). The Northampton Weather rain gauge at Hardingstone suggests a 1 in 136 annual exceedance probability event (0.74% probability of occurring each year).

2.1.4 Weather & Flood Warnings

2.1.4.1 The MET Office issued a yellow warning of heavy showers and thunderstorms across parts of Southern Britain through Saturday and Sunday. This included an area of the south of Northamptonshire, south of Daventry and Northampton.

2.1.4.2 The MET Office issued an amber warning of thunderstorms across parts of the Midlands and into north Wales through Sunday afternoon and into the evening. This included an area of the west of Northamptonshire, covering Daventry and Woodford Halse.

2.1.4.3 A guide to Met Office Weather Warnings can be found at: [https://www.metoffice.gov.uk/guide/weather/warnings](https://www.metoffice.gov.uk/guide/weather/warnings)

2.1.4.4 This level and location of weather warnings would not have instigated any specific preparation or response from Flood Risk Management Authorities or Emergency Services.
3. FLOODING HISTORY

3.1 Previous Reports of Flooding

3.1.1.1 No previous flooding incidents have been reported in this area
4. **LOCATION OF FLOODING**

4.1 **Location in Context**

4.1.1 **Catchment Area**

4.1.1.1 The affected area of Woodgate Road is located in a surface water catchment area that extends approximately 500 metres to the north.

4.1.2 The catchment is urban in nature with approximately 90% developed. Areas of open space comprise gardens and road verges.

4.1.3 **Affected Areas**

4.1.3.1 Flooding was experienced in various localised areas across the south of Northampton. Flooding was also experienced in Milton Keynes and Buckinghamshire, Warwickshire, the West Midlands and Birmingham.

4.1.3.2 The focus of this investigation is the effect on the areas around Woodgate Road. The flooding in these areas concurs with the areas shown to be at risk of flooding from surface water shown on the long term flood risk mapping.

4.1.3.3 Other locations in Northampton are the subject of separate Section 19 (FWMA) investigations and reports. These are shown on the plan in Appendix B.

4.1.4 **Long Term Flood Risk Mapping**

4.1.4.2 The maps are intended for guidance, and cannot provide details for individual properties. The maps have been produced by the Environment Agency.
This is an area that has a HIGH chance of flooding from surface water. This means that each year, this area has a chance of flooding of greater than 1 in 30 (3.3%).

This is an area that has a MEDIUM chance of flooding from surface water. This means that each year, this area has a chance of flooding of between 1 in 100 (1%) and 1 in 30 (3.3%).

This is an area that has a LOW chance of flooding from surface water. This means that each year, this area has a chance of flooding of between 1 in 1000 (0.1%) and 1 in 100 (1%).

This is an area that has a VERY LOW chance of flooding from surface water. This means that each year, this area has a chance of flooding of less than 1 in 1000 (0.1%).

### Flood Risk from Rivers or the Sea

<table>

5. DRAINAGE SYSTEMS & WATERCOURSES

5.1 Drainage Systems

5.1.1 Public Sewers

5.1.1.1 AWS are responsible for the separate foul and surface water public sewer systems which exist throughout this residential area, and which drain the wider catchment.

5.1.1.2 An 825mm diameter surface water sewer runs from west to east along Wootton Hope Drive, which is approximately 125m north from the affected area of Woodgate Road.

5.1.1.3 The main surface water sewer beneath the affected area of Woodgate Road is a 225mm diameter pipe. This flows south before combining with a 375mm diameter sewer running from east to west.

5.1.1.4 New surface water public sewers are generally required to have capacity for the 1 in 30 annual exceedance probability event without flooding. They receive surface water from private roofs and paved areas, and the public highway.

5.1.1.5 Historic drainage systems that have become the responsibility of AWS may not have been designed to any specific standard.

5.1.1.6 Planned inspection and maintenance is carried out to surface water sewer outfalls, controls and structures. This is carried out at a frequency determined by any previous issues at the location.

5.1.1.7 All maintenance was reported to have been carried out within the relevant timeframe with no issues highlighted.
5.1.2 Highway Drainage

5.1.2.1 Woodgate Road is identified as NCC maintained Highway.

5.1.2.2 The Highway Authority, Northamptonshire Highways, is responsible for road gullies and the pipework that connect these to the main drainage system.

5.1.2.3 Woodgate Road is served by a system of road gullies in the carriageway channels along the length of the roads.

5.1.2.4 Road gullies are normally provided to drain surface water from the public highway only, with no allowance for additional flow from private property.

5.1.2.5 Modern highway drainage systems are designed to have capacity for the 1 in 5 annual exceedance probability event. Historic highway drainage systems that have become the responsibility of the Highway Authority due to dedication, as opposed to adoption, may not have been designed to any standard.

5.1.2.6 Highway drainage is required to remove water in normal wet weather conditions so that the carriageway is safe for vehicular traffic, and to reduce structural damage to pavements caused by water.

5.1.2.7 The gullies in the area are inspected by Northamptonshire Highways on an annual cyclical basis. Gullies were inspected in August 2018 and of the 53 gullies in total, 52 were fully operational and one had a cracked lid.

5.1.3 Private Drainage

5.1.3.1 Private residential and commercial properties generally have their own drainage systems to collect surface water and convey this to an outfall. These comprise roof gutters and downpipes, and yard gullies.

5.1.3.2 The outfall is usually a soakaway, watercourse or public sewer. In the Wootton area and the wider catchment area, the most likely outfall for most private drainage systems is the surface water public sewer.

5.1.3.3 Individual property owners are responsible for their drainage systems. Various design standards will have applied over the catchment area as development progressed in this area during the 20th Century. Drainage systems with a capacity for the 1 in 5 annual exceedance probability event might be expected.
5.1.4 Other Unrecorded Drainage

There are no specific unrecorded drainage systems identified that relate to the flooding incident.

5.2 Natural Watercourses

5.2.1 Open Watercourses

5.2.1.1 An open watercourse runs from north to south within an area of open space located approximately 75m to the east of the affected area. This is turn heads south to a culvert under Wooldale Road and then further south to Wootton Brook.

5.2.1.2 There are no reports of any flooding issues relating to this water course.

5.2.1.3 Wootton Brook is located approximately 850 metres south of the affected area of Woodgate Road.

5.2.1.4 Wootton Brook is classified as a Main River. Main Rivers are those shown on the Statutory Main River Maps held by the EA. Whilst the EA has permissive powers to carry out works of maintenance and improvement to manage flood risk on these rivers, Riparian (private) ownership and maintenance responsibilities are still applicable.

5.2.1.5 These watercourses were reported to have responded well to the rainfall with no risk of flooding caused by increased water levels within them. EA monitoring equipment demonstrates that the rivers only responded very modestly and had significant remaining capacity to accommodate surface water. This concurs with the flooding being from surface water from higher ground rather than from watercourses.

5.2.2 Buried Watercourses

5.2.2.1 No specific buried watercourses are noted that relate to the flooding incident.

5.2.3 Structures

5.2.3.1 No specific structures on natural watercourses are noted that relate to the flooding incident.

5.3 Flood Resilience

5.3.1 Community or Property Level Resilience Measures

5.3.1.1 There were no reports of the existence of any community or property level resilience facilities in the area that could have been deployed to reduce flood risk.

<td>It</td>
<td>7pm receding from 10pm-ish.</td>
<td>Water flowed across the front of the house and in rear garden from bungalow boundary fence entering property via the front and back door. Externally flooded to 300/350mm and internally flooded to 100mm. Whole ground floor, conservatory and front &amp; rear gardens affected.</td>
<td>Drains and surrounding fields could not take the huge volume of water. Flood water was fast flowing and increased in depth like a lake.</td>
<td>Electric turned off.</td>
<td>Not able to take any action due to health. Neighbours helped to lift some items of furniture onto bricks etc.</td>
<td>Gully up by pharmacy was blocked</td>
<td>Called fire service at about 7.15pm and they turned up at about 2.45am Monday morning.</td>
<td>Not in the 11 years I have been living here</td>
</tr>
</tbody>
</table>
6.1.2 In total, 7 properties are reported to have flooded internally in Woodgate Road. There may be more, but these have not been reported following engagement efforts to obtain information, which could be for various reasons.

6.2 Rainfall and Flood Water

6.2.1 Rainfall

6.2.1.1 The rainfall described in Section 2 fell on the catchment between approximately 19:00 and 21:00.

6.2.2 Direction of Surface Water Flow

6.2.2.1 The main reported sources of flow to affect this area were from the school and nursery grounds immediately to the north of the affected area. Water flowed down the catchment from north to south through residential areas.

6.2.2.2 Surface water flow was described as fast flowing and deepening around low points adjacent to the properties.

6.2.3 Standing Water

6.2.3.1 The majority of surface water from the surrounding catchment flowed to low points to the rear of Woodgate Road. This is consistent with those areas modelled on the Surface Water Flood Risk Mapping shown in Section 4.1.3.

6.2.3.2 Surface water that flowed to the rear of the properties first increased in depth within the gardens and against the dwellings.

6.2.3.3 Standing water was reported to be in excess of 2 feet deep.

6.2.3.4 Standing water drained down over a few hours following the rainfall, with most flood water around the properties subsiding by midnight on 27/05/18.

6.2.4 Specific Features That May Have Affected Water Flow

6.2.4.1 Gullies on Wootton Hope Drive were reported to be blocked prior to the event.

6.2.4.2 Surface water overtopped the Highway and followed the local topography across the school and nursery grounds to the rear of the private gardens in Woodgate Road.

6.2.4.3 There are also reports of excessive grass cuttings with overgrown verges having been cut a couple of days prior to the flooding event. These are reported to have caused blockages to the road gullies in the vicinity.

6.2.4.4 Even in a fully cleansed and operational condition, the system of private drainage, road gullies and public sewers throughout the catchment would not have the capacity to collect and convey the quantity of rain experienced.

6.2.4.5 Runoff from private property and areas of open space contributed to the surface water flow in the public highway, reducing the capacity of road gullies. Road gullies throughout the catchment area would have been at capacity and ineffective very soon after the start of the storm.
6.2.4.6 Clear, well maintained drainage systems are vital to the satisfactory operation and longevity of the built environment. The flood incident was a result of an exceedance event with rainfall in excess of design capacity of drainage systems. The approximate extent and peak depth of surface water flooding experienced would have occurred regardless of the state of maintenance of drainage systems, except the speed of drain down following rainfall may have been faster in some areas.

6.2.4.7 Affected roads remained open to traffic while they were flooded.
6.3 Response to Flooding

6.3.1 Immediate Response

6.3.1.1 There was no specific MET Office warning to be prepared for the rainfall in this area, and therefore responses were based on calls for help made as the rainfall and flooding happened. Fluvial flood warnings in the Main River Nene were not issued as the river level triggers were not reached.

6.3.1.2 The response by emergency services and local authorities was therefore reactive to information being received during the emergency. Communication lines between Agencies (e.g. Police, Fire & Rescue, NBC & NCC) were affected by the volume of calls received due to the sudden nature of the rainfall and the numerous separate areas of flooding in Northampton.

6.3.1.3 The sudden nature of the rainfall and numerous separate areas of flooding in Northampton caused difficulties for all Agencies to ascertain precisely which areas of the town were experiencing flooding and the level of impact.

6.3.1.4 Fire and Rescue received over 160 emergency calls at the time of the flood incident from various areas of Northampton that were affected. This included the normal level of calls relating to fires and other emergencies.

6.3.1.5 Fire and Rescue sent out an initial response of personnel and equipment to several affected areas of Northampton, but most resources were subsequently diverted to St Leonard’s Road based on pre-established priority criteria. This included particularly vulnerable people at risk.

6.3.1.6 The topography of the St Leonard’s Road area also raised the priority for that area of Northampton. Its unique situation as a natural bowl could lead to standing water of increasing depth, which could have led to a protracted incident.

6.3.1.7 NCC Emergency Planning Team collated information from numerous sources relating to the widespread flooding, which assisted in informing and coordinating the response of the emergency services and local authorities.

6.3.2 Follow Up Response

6.3.2.1 Recovery and response arrangements for the following day were made between Agencies and partner organisations late on the night of the flooding incident.

6.3.2.2 In the following days various response teams were on site in the known affected areas within the Woodgate Road area. These included:

- Northamptonshire Highways, NCC
- Anglian Water
- Western Power Distribution
- Fire and Rescue

6.3.2.3 A recovery incident room was established at One Angel Square from midday to help coordinate the partnership response to the incident.
A Tactical Co-ordinating Group call was held at 10:00 and subsequent calls and meetings were held throughout the day and into the week, involving multiple Agencies. This gathered and organised all information that had been received about the incident from various sources. It enabled decisions on priorities and deployment to be made, with information passed to the relevant authorities, services and public. This enabled communication with affected property owners, occupiers and businesses, and provision of relevant emergency help, information, contact details and advice.

The Multi Agency Recovery Strategy was to:

1. Facilitate clean-up and removal of safety hazards in the affected area.
2. Provide relevant information and advice to those affected.
3. Provide access to emergency help to those affected by flooding.
4. Undertake a full community impact assessment.
5. Coordinate available assistance and relief to affected residents.
6. Coordinate with the business sector to support economic recovery.
7. Undertake appropriate Section 19 flood investigations.

Northamptonshire Highways and AWS worked over the following days to clear drains and remove flood debris.

Waste collection and drainage cleansing continued over the following week, including collection of damaged items left outside properties.

NCC opened an Information Centre for affected residents and businesses at Delapre Annexe from 11:00 on Tuesday 29th May 2018 until the evening of Thursday 31st May 2018. This was attended by NCC, NBC, Northamptonshire Highways, Local Councillors, Western Power and AWS.

NCC Flood and Water Management Team processed formal and anecdotal reports of flooding and instigated the Section 19 Flood Incident Investigation. Individual reports of the flood incident continued to be received by the LLFA over the following weeks.
7. **CONCLUSION**

7.1.1 The flooding in the Woodgate Road area was caused by intense heavy rainfall beyond the design capacity of drainage systems across the catchment. This led to excess surface water flowing over ground, following localised topography to low points.

7.1.2 Long grass cuttings were also reported with the grass having been extremely overgrown and having been cut a couple of days before. These cutting were washed to the gully locations and potentially affected the efficiency of the gully by matting across the top and restricting the effectiveness of the surface water drainage.

7.1.3 Whilst some drainage systems were reported to need maintenance and cleansing prior to the flooding incident, this is considered unlikely that this was the difference between the flood event occurring or not occurring.

7.1.4 The Woodgate Road area is situated within a relatively large, predominantly urban surface water catchment area. Underlying topography channels the surface water in a southerly and easterly direction to the low points through the private gardens. It is shown to be at risk of surface water flooding on published Long Term Flood Risk Mapping.

7.1.5 There was no prior warning of the location and extent of heavy rainfall, or that the rainfall would be so intense and localised in the affected areas.

7.1.6 There are no community or property level resilience measures in place that could have been deployed.

7.1.7 The following are the Key Recommendations resulting from the flood incident:

- Owners of affected properties should consider preparing a Household Emergency Plan and implementing Property Level Resilience.
- With support from Flood Risk Management Authorities, the community should make efforts to:
  - Appoint Community Flood Wardens,
  - Prepare a Community Emergency Plan,
  - Explore options for funding and contributions for schemes to manage surface water and flood risk.
• The Lead Local Flood Authority should coordinate with other Flood Risk Management Authorities to extend publicity of the existing information available in relation to flood risk at https://www.floodtoolkit.com/ and consider further means to pinpoint the dissemination of this information to specific communities at risk of flooding.

• The Lead Local Flood Authority should work with the community and Local Authorities to assess the viability of options for engineering schemes to reduce flood risk. This might include community level flood resilience measures, improving drainage to accommodate extreme rainfall events, providing attenuation storage areas and creating formal overland flood flow routes.
8. **RECOMMENDATIONS**

8.1 **General**

8.1.1 Listed below are the recommended course of actions emanating from this formal Flood Investigation Report.

8.1.2 It is important to note that it is for the relevant responsible body or persons to assess each recommendation in terms of the legal obligation, resource implications, priority and cost/benefit analysis of undertaking such action.

8.1.3 The recommendations may be included within the Action Plan linked to the Local Flood Risk Management Strategy or in the relevant risk management authority’s future work programmes, as appropriate.

8.2 **Communities**

(e.g. Town/Parish Council, Flood Forum, Community Groups, land owners and affected residents)

8.2.1 Review the library of flood guides on the Flood Toolkit. NCC has produced a number of flood guides covering various subjects, some of which relate to this flood incident. The relevant guides have been identified and are available at:

8.2.2 Recruit Community Flood Wardens to help coordinate the production of a Community Emergency and Flood Plan, the template for which can be found on the Flood Toolkit here:

This can include:

- a plan of the community showing areas at risk of flooding, especially vulnerable properties and particularly vulnerable people (e.g. elderly, medical conditions, young families);
- a plan of the community outlining the ownership and maintenance regimes of drainage systems, with contact details to report any issues;
- a list of any improvements to existing drainage systems that are required.

This information should be used to inform the basis of preparing Household Emergency Plans for vulnerable properties in this area, a template for which can be found on the Flood Toolkit here:

8.2.1.3 Regularly inspecting drainage systems in the area. Report blockages or other issues to the responsible owner and the LLFA.

8.2.1.4 Explore options for Property Level Resilience. Information on Flood Prevention measures for Home Owners, Communities and Businesses can be found on the Flood Toolkit here:

http://www.floodtoolkit.com/risk/prevention/

These measures can apply to single properties or larger systems that can be applied to protect multiple properties and communities.

8.2.1.5 Explore catchment wide solutions such as attenuation areas (balancing ponds), rain gardens, overflow routes and tree planting, and potential funding options to take this forward.

8.2.1.6 Use the Flood Toolkit Funding Tool to find sponsors who may be willing to help fund improvement projects: http://www.floodtoolkit.com/risk/funding/

8.2.1.7 Continue to report flood incidents to the LLFA at:

https://www.floodtoolkit.com/emergency/report-flood/. Endeavour to obtain as much evidence of flood events as possible, such as photographic and video evidence.

8.2.1.8 Have a Community Flood Risk Report carried out. NCC’s Flood and Water Management Team can prepare flood risk reports for your community. Email: floodandwater@northamptonshire.gov.uk with the subject title “community flood risk report for [name of your community]”. Example Community Flood Risk Reports for the villages of Brigstock and Geddington can be downloaded from the Flood Toolkit here:

http://www.floodtoolkit.com/how-to-guides/community-project/

8.2.1.9 A Community Flood Risk Report could then be used to produce a more detailed Community Flood Risk and Mitigation Investigation. This will find specific areas in the catchment that could be inspected, improved or monitored to reduce flood risk. There are guides to help through this process, available on the Flood Toolkit here:

http://www.floodtoolkit.com/how-to-guides/community-project/

8.2.1.10 NCC Emergency Planning Team work with many organisations to support local people and groups to get together to use their local skills, knowledge and resources to deal with emergency situations. This can include training.

People are encouraged to work together to produce a Community Self Help Plan for the area they live in.
Further information can be found at:

8.2.1.11 Property owners should undertake regular inspection and maintenance of their drainage systems in accordance with a defined maintenance regime. Property owners should assess the capacity of their drainage systems and identify any areas with insufficient capacity. Where this could lead to runoff to the public highway or nuisance to third party private property, improvement works should be considered.

8.3 Lead Local Flood Authority (LLFA)

8.3.1.1 Work with the NCC Emergency Planning Team and the EA to support community based Flood Wardens, should they be recruited.

8.3.1.2 Work with the NCC Emergency Planning Team, the EA and other flood management authorities to support the community in the production of a Community Emergency and Flood Plan and provide advice to residents on how to explore options for property level resilience.

8.3.1.3 Once this investigation report has been published, work with riparian owners, parish councils and local groups within the overall surface water catchment area, reminding them of their legal responsibilities for drainage and watercourse maintenance and the benefits of doing it.

8.3.1.4 Continue to provide information and resources relating to flood risk, preparedness and response via the Flood Toolkit website. Consider increased, ongoing publicity of this information source.

8.3.1.5 Work with the community and Local Authorities to assess the viability of options for engineering schemes to reduce flood risk. This might include community level flood resilience measures, improving drainage to accommodate extreme rainfall events, providing attenuation storage areas and creating formal overland flood flow routes.

8.4 Highway Authority – Northamptonshire Highways

8.4.1.1 Undertake regular highway drainage cleansing throughout the catchment. Identify and develop a detailed plan of their assets to share with the LLFA and the community.

8.4.1.2 Consider more regular inspection and maintenance of highway drainage systems in areas identified as being at risk on the Surface Water Flood Risk Mapping.

8.4.1.3 Assess the capacity of their assets and identify any areas with insufficient capacity for draining normal runoff from the highway. Where this leads to flood risk to properties improvement works should be considered.

8.4.1.4 Assess the suitability of third-party drainage systems accepting discharge from Highway Drainage systems and report any unsatisfactory areas to the LLFA.

8.4.1.5 Assess the viability of road closures to ensure all drains can be inspected and cleansed where required.

8.4.1.6 Work with the LLFA, Community and Local Authorities to assess the viability of options for engineering schemes to reduce flood risk, as detailed in 8.3.1.5.

8.4.1.7 Assist the LLFA in publicising the Flood Toolkit information resource.
8.4.1.8 Work with the police on how road closures can be put into effect during times of flooding.

8.5 Water Company - Anglian Water Services (AWS)

8.5.1.1 Assess the sources of water entering the public sewerage system.

8.5.1.2 Assess the capacity of their assets and identify any areas of insufficient capacity. Where this leads to flood risk to properties improvement work should be considered.

8.5.1.3 Continue to update the detailed plan of their assets to share with the LLFA and the Community. Work with property owners to identify drainage that may be transferred to Anglian Water under the Private Sewer Transfer.

8.5.1.4 Work with the LLFA, Community and Local Authorities to assess the viability of options for engineering schemes to reduce flood risk, as detailed in 8.3.1.5.

8.5.1.5 Assist the LLFA in publicising the Flood Toolkit information resource.

8.6 Northampton Borough Council (NBC)

8.6.1.1 Continue to consult with the EA and LLFA (Surface Water Drainage Team) as required in respect of planning applications for new developments to reduce flood risk. Aim to ensure that all works are carried out in accordance with the approved plans and documents.

8.6.1.2 Review the planning policies relating to developments in the vicinity of the flooding incident, together with any flood risk assessments and drainage designs. Consider contacting the developers to take action in the event that any items relating to surface water drainage and flood risk are not evident or ineffective in the final developments or in the construction period.

8.6.1.3 Utilise their powers under Section 20 of the Land Drainage Act 1991 to carry out drainage works.

8.6.1.4 Endeavour to assist other flood risk management authorities and land owners in the preparation of a detailed plan of assets relating to drainage and flood risk, to share with the LLFA and the community.

8.6.1.5 Carry out Street Cleaning to remove litter and detritus which could affect drainage systems.

8.6.1.6 Work with the LLFA, Community and Local Authorities to assess the viability of options for engineering schemes to reduce flood risk, as detailed in 8.3.1.5.

8.6.1.7 Assist the LLFA in publicising the Flood Toolkit information resource.

8.6.1.8 In coordination with relevant Management Organisations, consider a review of property and housing that the Borough Council are responsible for, in the context of flood risk and property level resilience. This may include advising tenants of the risk of flooding on a case by case basis.

8.6.1.9 Work with Anglian Water to identify drainage that might be applicable to the Private Sewer Transfer.
8.7 Environment Agency (EA)

8.7.1.1 Work with the NCC Emergency Planning Team and the LLFA to support the community and, should one be recruited, a community based Flood Warden.

8.7.1.2 Work with the LLFA, Community and Local Authorities to assess the viability of options for engineering schemes to reduce flood risk, as detailed in 8.3.1.5.

8.7.1.3 Carry out engagement activity with communities in the Wootton area on flood risk from Wootton Brook and local watercourses.

8.7.1.4 Assist the LLFA in publicising the Flood Toolkit information resource.

8.8 Developers

8.8.1.1 Developers should work with local authorities to ensure all development does not increase flood risk (from any source) to the site or adjacent land and is completed in accordance with approved plans, documents, and planning policy.

8.8.1.2 For more information on planning policy, standards and associated guidance, see the Flood Toolkit - https://www.floodtoolkit.com/planning/developers/
9. **RIGHTS AND RESPONSIBILITIES**

9.1 **Communities**

9.1.1 Communities may consist of the Town or Parish Council, a Flood Forum, Community Action Group, affected residents and land owners, amongst others.

9.1.2 Property owners who are aware that they are at risk of flooding should take action to ensure that they and their properties are protected.

9.1.3 Communities and residents, as property owners, have responsibility for their private drainage systems. They may have riparian responsibilities if their land boundary is next to a watercourse, a watercourse runs alongside their garden wall or hedge, and/or a watercourse runs through or underneath their land.

9.1.4 Community resilience is important in providing information and support to each other if flooding is anticipated. Actions taken can include subscribing to MET Office email alerts for weather warnings, supporting a Community Flood Warden, producing a Community Emergency and Flood Plan, implementing property level resilience and moving valuable items to higher ground.

9.1.5 Anyone affected by flooding should try to document as much information about the incident as possible using the Flood Incident Report Form, which can be found at: https://www.floodtoolkit.com/emergency/report-flood/

9.2 **Lead Local Flood Authority (LLFA)**

9.2.1 As stated within the introduction section, the LLFA has a responsibility to investigate flood incidents under Section 19 of the F&WMA.

9.2.2 The LLFA also has a responsibility to maintain a register of assets which have a significant effect on flooding from surface runoff, groundwater or ordinary watercourses (non-Main River) as detailed within Section 21 of the F&WMA.

9.2.3 The register must contain a record about each structure or feature, including the ownership and state of repair. The LLFA is also required to keep a record of flooding hotspots across the county.

9.2.4 As the responsible Lead Local Flood Authority for the affected property in Northamptonshire, NCC will be looking for support from other risk management authorities, communities and individual home owners to ensure flood incidents are reported, and any assets which have a significant effect on flood risk are recorded on the asset register.

9.2.5 While NCC can suggest possible causes of flooding, and make recommendations to ensure flood risk is mitigated as far as possible, the F&WMA does not provide NCC with the mandate or funding to act on identified causes of flooding or force risk management authorities to undertake any recommended actions.
9.3 Highway Authority – Northamptonshire Highways

9.3.1.1 Highway Authorities have a duty to maintain the highway under Section 41 of the Highway Act 1980 but subject to the special defence in Section 58.

9.3.1.2 New highway drainage systems are designed to Highways England’s Design Manual for Roads and Bridges (Volume 4, Section 2). They are only required to be constructed to drain surface water run-off from within the highway catchment rather than from the wider catchment.

9.3.1.3 There are historic drainage systems in historic highways which can become the responsibility of the Highway Authority due to dedication, as opposed to adoption. These drainage systems may not have been designed to any standard.

9.4 Water Authority (Anglian Water Services) (AWS)

9.4.1.1 Water and sewerage companies are responsible for managing the risks of flooding from surface water, foul water or combined sewer systems. Public sewers are designed to protect properties from the risk of flooding in normal wet weather conditions. However, in extreme weather conditions there is a risk that sewer systems can become overwhelmed and result in sewer flooding.

9.4.1.2 Since October 2011, under the ‘Private Sewer Transfer’, AWS adopted piped systems on private land that serve more than one curtilage and were connected to a public sewer on 1st July 2011. Sewerage Undertakers have a duty, under Section 94 of the Water Industry Act 1991, to provide sewers for the drainage of buildings and associated paved areas within property boundaries.

9.4.1.3 Sewerage Undertakers are responsible for public sewers and lateral drains. A public sewer is a conduit, normally a pipe that is vested in a Water and Sewerage Company or predecessor, that drains two or more properties and conveys foul, surface water or combined sewage from one point to another, and discharges via a positive outfall.

9.4.1.4 There is no automatic right of connection for other sources of drainage to the public sewer network. Connection is therefore discretionary following an application to connect.

9.5 Northampton Borough Council (NBC)

9.5.1.1 Borough and District Councils have powers under Section 14 of the Land Drainage Act 1991 (LDA) to undertake flood risk management works on ordinary watercourses (non-Main River) where deemed necessary.

9.5.1.2 Under Section 20 of the LDA, councils have the powers to (by agreement of any person and at that person’s expense) carry out any drainage work which that person is entitled to carry out. Agreement may not be required in certain emergency or legally upheld situations. These powers are subject to consent from the LLFA.

9.5.1.3 The Borough Council is the Local Planning Authority and have a role in Building Control and the Building Regulations.

9.5.1.4 They are responsible for street cleansing and waste removal, and manage property and housing in the borough.
9.6 Environment Agency (EA)

9.6.1.1 The EA has a strategic overview responsibility of all sources of flooding and coastal erosion under the F&WMA.

9.6.1.2 The responsibility for maintenance and repair of Main Rivers lies with the riparian owner, but the EA have permissive powers to carry out maintenance work on Main Rivers under Section 165 of the Water Resources Act 1991 (WRA).

9.6.1.3 Main River means all watercourses shown as such on the statutory Main River maps held by the Environment Agency and the Department of Environment, Food and Rural Affairs, and can include any structure or appliance for controlling or regulating the flow of water into, in or out of the channel.

9.6.1.4 The EA will encourage third party asset owners to maintain their property in appropriate condition and take enforcement action where it is appropriate. They may consider undertaking maintenance or repair of third party assets only where it can be justified in order to safeguard the public interest and where other options are not appropriate.

9.6.1.5 Wootton Brook is the nearest main river, this is not considered to have been a factor in this flooding incident.

9.6.1.6 Other work carried out by the EA includes:

- Working in partnership with the Met Office to provide flood forecasts and warnings.
- Developing long-term approaches to Flood and Coastal Erosion Risk Management (FCERM). This includes working with others to prepare and carry out sustainable Flood Risk Management Plans (FRMPs). FRMPs address flood risk in each river catchment. The Environment Agency also collates and reviews assessments, maps and plans for local flood risk management (normally undertaken by lead local flood authorities (LLFAs)).
- Providing evidence and advice to support others. This includes national flood and coastal erosion risk information, data and tools to help other risk management authorities and inform Government policy, and advice on planning and development issues. The EA are statutory consultees of the Local Planning Authority.
- Working with others to share knowledge and the best ways of working. This includes work to develop FCERM skills and resources.
- Monitoring and reporting on FCERM. This includes reporting on how the national FCERM strategy is having an impact across the country.

9.7 Land Owners and Developers

9.7.1.1 Land owners must let water flow through their land without any obstruction, pollution or diversion which affects the rights of others. Others also have the right to receive water in its natural quantity and quality. All riparian owners have the same rights and responsibilities;

9.7.1.2 Land owners must accept flood flows through their land, even if these are caused by inadequate capacity downstream. Legally, owners of lower-level ground have to accept natural land drainage from adjacent land at a higher level. The exception to this is where the owner of the higher level land has carried out “improvements” such that the run-off from the land cannot be considered “natural”.
9.7.1.3 Land owners must keep any structures, such as culverts, trash screens, weirs, dams and mill gates, clear of debris.

9.7.1.4 Land owners and developers are responsible for working with the Local Planning Authority to ensure that their development is completed in accordance with the planning permission and all conditions that have been imposed.

These rights and responsibilities are summarised in the Government guidance – Owning a Watercourse:
https://www.gov.uk/guidance/owning-a-watercourse

Advice for developers is available on the Flood Toolkit.
http://www.floodtoolkit.com/planning/developers/

The flood guides detailed in 4.2.1 above should also be referred to.
DISCLAIMER

This report has been prepared as part of Northamptonshire County Council’s responsibilities under the Flood and Water Management Act 2010. It is intended to provide context and information to support the delivery of the Local Flood Risk Management Strategy and should not be used for any other purpose.

The findings of the report are based on a subjective assessment of the information available by those undertaking the investigation and therefore may not include all relevant information. As such it should not be considered as a definitive assessment of all factors that may have triggered or contributed to the flood event.

Any recommended actions outlined in this FIR will be for the relevant responsible body or persons to assess in terms of resource implications, priority and cost/benefit analysis of the proposal. Moving forward, these may be included in the Action Plan linked to the Local Flood Risk Management Strategy or in the relevant risk management authority’s future work programme as appropriate.

The opinions, conclusions and any recommendations in this report are based on assumptions made by David Smith Associates and Northamptonshire County Council when preparing this report, including, but not limited to those key assumptions noted in the report, including reliance on information provided by others.

David Smith Associates and Northamptonshire County Council expressly disclaim responsibility for any error in, or omission from, this report arising from or in connection with any of the assumptions being incorrect.

The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the time of preparation and David Smith Associates and Northamptonshire County Council expressly disclaim responsibility for any error in, or omission from, this report arising from or in connection with those opinions, conclusions and any recommendations.

The implications for producing Flood Investigation Reports and any consequences of blight have been considered. The process of gaining insurance for a property and/or purchasing/selling a property and any flooding issues identified are considered a separate and legally binding process placed upon property owners and this is independent of and does not relate to the County Council highlighting flooding to properties at a street level.

David Smith Associates and Northamptonshire County Council do not accept any liability for the use of this report or its contents by any third party.

Environment Agency Standard Notice
You are encouraged to use and re-use the Information that is available under this licence freely and flexibly, with only a few conditions.

**Using Information under this licence**

Use of copyright and database right material expressly made available under this licence (the ‘Information’) indicates your acceptance of the terms and conditions below.

The Licensor grants you a worldwide, royalty-free, perpetual, non-exclusive licence to use the Information subject to the conditions below.

This licence does not affect your freedom under fair dealing or fair use or any other copyright or database right exceptions and limitations.

**You are free to:**

- copy, publish, distribute and transmit the Information;
- adapt the Information;
- exploit the Information commercially and non-commercially for example, by combining it with other Information, or by including it in your own product or application.

**You must (where you do any of the above):**

- acknowledge the source of the Information in your product or application by including or linking to any attribution statement specified by the Information Provider(s) and, where possible, provide a link to this licence;

If the Information Provider does not provide a specific attribution statement, you must use the following:

Contains public sector information licensed under the Open Government Licence v3.0.

If you are using Information from several Information Providers and listing multiple attributions is not practical in your product or application, you may include a URI or hyperlink to a resource that contains the required attribution statements.

These are important conditions of this licence and if you fail to comply with them the rights granted to you under this licence, or any similar licence granted by the Licensor, will end automatically.

**Exemptions**

This licence does not cover:

- personal data in the Information;
- Information that has not been accessed by way of publication or disclosure under information access legislation (including the Freedom of Information Acts for the UK and Scotland) by or with the consent of the Information Provider;
- departmental or public sector organisation logos, crests and the Royal Arms except where they form an integral part of a document or dataset;
- military insignia;
- third party rights the Information Provider is not authorised to license;
- other intellectual property rights, including patents, trade marks, and design rights; and
- identity documents such as the British Passport

**Non-endorsement**

This licence does not grant you any right to use the Information in a way that suggests any official status or that the Information Provider and/or Licensor endorse you or your use of the Information.
**No warranty**

The Information is licensed ‘as is’ and the Information Provider and/or Licensor excludes all representations, warranties, obligations and liabilities in relation to the Information to the maximum extent permitted by law.

The Information Provider and/or Licensor are not liable for any errors or omissions in the Information and shall not be liable for any loss, injury or damage of any kind caused by its use. The Information Provider does not guarantee the continued supply of the Information.

**Governing Law**

This licence is governed by the laws of the jurisdiction in which the Information Provider has its principal place of business, unless otherwise specified by the Information Provider.

**Definitions**

In this licence, the terms below have the following meanings:

'Information' means information protected by copyright or by database right (for example, literary and artistic works, content, data and source code) offered for use under the terms of this licence.

'Information Provider' means the person or organisation providing the Information under this licence.

'Licensor' means any Information Provider which has the authority to offer Information under the terms of this licence or the Controller of Her Majesty's Stationery Office, who has the authority to offer Information subject to Crown copyright and Crown database rights and Information subject to copyright and database right that has been assigned to or acquired by the Crown, under the terms of this licence.

'Use' means doing any act which is restricted by copyright or database right, whether in the original medium or in any other medium, and includes without limitation distributing, copying, adapting, modifying as may be technically necessary to use it in a different mode or format.

'You', 'you' and 'your' means the natural or legal person, or body of persons corporate or incorporate, acquiring rights in the Information (whether the Information is obtained directly from the Licensor or otherwise) under this licence.

**About the Open Government Licence**

The Controller of Her Majesty's Stationery Office (HMSO) has developed this licence as a tool to enable Information Providers in the public sector to license the use and re-use of their Information under a common open licence. The Controller invites public sector bodies owning their own copyright and database rights to permit the use of their Information under this licence.

The Controller of HMSO has authority to license Information subject to copyright and database right owned by the Crown. The extent of the Controller's offer to license this Information under the terms of this licence is set out in the UK Government Licensing Framework.

This is version 3.0 of the Open Government Licence. The Controller of HMSO may, from time to time, issue new versions of the Open Government Licence. If you are already using Information under a previous version of the Open Government Licence, the terms of that licence will continue to apply.

These terms are compatible with the Creative Commons Attribution License 4.0 and the Open Data Commons Attribution License, both of which license copyright and database rights. This means that when the Information is adapted and licensed under either of those licences, you automatically satisfy the conditions of the OGL when you comply with the other licence. The OGLv3.0 is Open Definition compliant.

Further context, best practice and guidance can be found in the UK Government Licensing Framework section on The National Archives website.

Go to the version 1 of the licence.
Go to the version 2 of the licence.
Go to the Welsh version of the licence.
